Title	PERIMENT PERIMENT PRIME FACTORS PRIME F	
	Prime factors of a positive integer are the prime numbers that divide that integer exactly.	
Riveson	Given an array arr of n integers and a positive integer num. Let's suppose prime factorization of num is: $p^a \times q^b \times r^c \times \times z^f$, where p,q,rz are prime numbers.	235022
502385	Sum of numbers in array arr at indices of prime factors of number num is: a x arr(p) + b x arr(q) + c x arr(r) + + f x arr(z). You are given an array arr of size n and a positive integer num. You are required to calculate the sum of numbers in arr as mentioned above, and print the same.	502388
12 38R2735	Note:	3 Section
Banges	Input Format: The input consists of three lines:	
	• The second line contains an arrow arr of length of n.	Sen Scani
25022	Output Format:	35022
BRET	Print the sum that was mentioned in the problem statement. Example:	522 38R2
	1mput: 6	
	11 21 32 45 1 23 6 Output:	38 22 35 S
	T7 Explanation:	A SECOND
