ADVACED SUB ARRAY PROBLEM	
ADDITION OF THE PROPERTY OF TH	622 38E
ADVACED SUB ARRAY PROBLEM You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance from the standard of the	-2
You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance from t basket and the player's position. The ball is shot N times, successfully. You are given an array A containing the distance of a player	he 300
basket for N shots. The index of array represents the position of the player. Score is calculated by multiplying the position with t	ine
Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a contiguo	ous soon of
subarray of size K from the given array.	30
Note: * A subarray is a contiguous part of array.	
* Assume 1 based indexing.	2023 38 80 J
• The array contains both negative and positive values.	
* The array contains both negative and positive values. * Assume the player is standing on a cartesian plane.	3827302
Input Format	750
- input1:An integer value N representing the number of shots made by the player - input2: An integer K representing the size of subarray	აე?
	27365077
- input3 : An array of integers Sample Input	
- input3 : An armay of integers Sample Input 5	2007 30 E
2	
12345 Sample Output	್ಷನ
14	150 38 E.S.
